RE: Keeyask Hydro Project.

My name is Kori Pearson. I am a student of Otter Nelson River School. I am in the 10<sup>th</sup> grade of high school. I think that the Keeyask Hydro Project is a bad idea to build near Split Lake. The new dam will possibly affect the environment, water, species, animals, plants and fish. There will be a recreation of the land, if the dam is built. The new dam might affect other communities and not just places like Split Lake. It may also affect our community (Cross Lake). The dam that was built near Cross Lake as affected our community. Our water/lake used to be clear not green or brown. It has affected animal life as well. We were given such crappy houses. I do not want that to happen anywhere else. Their hydro bills might go as higher than they are now. There is a chance to say I do not want the new dam built.
