RE: Keyask Hydro Project

I am Jordyne Ross. Class of grade 10.

I think about this new dam/bridge project not worth it. I find it a bad thing to do! Why? Cause it affects the community it affects the water, land, population of the living species in the water, also as homes/houses that are near the shorelines/water. If the people/gov people cared about the stuff that went wrong with having a dam built, they would know to say NO! to this upcoming project the hydro people are tryna do.

It'll effect too much so much in so what little time. The lands, waters, species, animals, fish, plants, recreation shore lines and what so ever else effected just by making this dam. The dam here built in Crosslake effected alot in the past few years, so why build another dam when you know what's gonna happen to the community.
