Re: Keeyask Hydro Project

Oct. 9/13

I am Kaylin Ross. This is what I think of the dam that you will be building. I think it is a bad idea. What if this project floods our community and that would not be good. Our land will be destroyed also the animals, plants, fish, and us the people of Cross Lake First Nation will be affected. We usually do everything on the land like trapping, berry picking, and picking the medicine. Especially the water, a lot of our people like to fish, if the water keeps rising up and down they won't be able to fish at all. Some people live by the lake, if the water rises too high they will have to leave their homes. I am sorry to say but I think this will be a bad idea to do this project. It will affect our community and other communities in the North.
