This is what I think about the new hydro dam is another bad idea because the other hydro dams cause amount of damage to the community and the environment in the past. There are no concerns to a clean environments, it is just going to destroy their hearts when they see the environment is destroyed by our decision (If we nations EVER agree). The more dams the less trapping and fishing, less land but flooded areas. The chemicals will be in the lake and the fish will be poisoned the animals will be suffocating drowning and diseased. We got to think of our ancestors they are buried amongst those areas and they should be peace instead of shattered graves, bones flowing around the lakes or along the rivers. So we don't need another dam to be build and be used for our sake.
