

RE: Keeyask Hydroelectric Project

October 4, 2013

To the Clean Environment Commission

I am Lindsay Osborne, and I am a grade 12 student from Otter Nelson River School. My concern to the Keeyask Hydroelectric Project is the environment. The dam will damage the land of Split Lake, Manitoba. The dam will destruct the homes of many animals. The dam will also ruin the plants. If the plants are ruined, people will not be able to use it for medicine. The water will be polluted from all the decomposed plants from the land. Many fishes will be killed from the building of the dam, and the fish population will drop dramatically. There will only be little catches for the people who fish, and families will barely have fish to eat. The people of Split Lake, Manitoba will also be majorly affected.
