RE: Keeyask Hydro Project

Tansi! My name is Shevon Monias. I am a student at Otter Nelson River School, I am in Grade 11. I think it's bad to make another dam. It affected us by the flooding in 2011. The roads were starting to break. School started late because of the flood. Students had to walk from their house to get to school. These DAMS are ruining our communities, our water, and our land.

The water level has changed a lot. Fishermen sometimes don't get to fish because of how low or high the water is. People on their boat don't know if they are going to hit a rock because of the water level changing. The trees are falling because of the water pushing against them. People have found bones of our ancestors on the shoreline. They should've used something else to get hydro instead of our water.

Why would you even make another dam when you already made enough DAMAGE?

Sincerely; Shevon Monias
