

June 3 / 2017

Dear Clean Environment Commission;  
I am writing on behalf of my  
husband and myself.

We are part of a group we did not  
choose to join. We will be one of many  
families affected by the proposed M.M.T.P.

Our property has been in my family for  
well over one hundred years. Both my  
husband and I were raised on farms.  
Hard work, dedication and most of all  
a love of the land was the way of life.

We attended "Information meetings,"  
and came away with more questions than  
answers. Hydro employees were very evasive,  
clearly could not answer a straight question.

We asked these same employees if they  
would agree to having M.M.T.P. near them.  
Down to a person, they had no comment.

We see and hear often of past practices  
that were all too often wrong. At the  
very least there are concerns of liability,  
magnetic radiation, destruction of pristine  
forests.

Unlike Hydro, we do not have a host of  
high-priced lawyers. In this case we can  
only hope that "Right vs. might" will  
mean Hydro will have more answers for  
those of us asking questions.

Sincerely,  
Amanda McFarland
