

To who ever it may concern, Hi I'm Emily Mous of
Ottelburne, Manitoba. I'm here today to speak against
the Bi Pole 3 plan. The proposed route would adversely
affect my farm that has been in our family for generations.
I have a unique situation that my land is in reeve lots
and not in quarter sections. Even though, I will have
no towers on my property, but I will not be able to
aerial spray north and south because of the Transmission
line runs north of the Toward Drain. Reeve lots are
long and narrow and not square like quarter sections.
I have no choice but to seal and spray height areas.
~~What conditions will be met~~ ^{What population} I need aerial planes to
control weeds ^{or} insects to protect my crops. This
Bi pole 3 line will seriously affect my farm of row crop ^{on}
soybeans + corn. ^{(~~the way~~ How is Hydro going to compensate me with no towers on} I do not appreciate Hydro's first plan
to go one way and then change to an alternate route
later after some objections of land owners. You are putting
farmers against farmers, friends against friends to where
the line should be. Hydro should not be going in
the prime ^{ag} agricultural and most expensive land areas.
of the government and Hydro say we need this for future
export sales why are we going the expensive route and
purposefully adding over or estimated 1 billion dollars to
the cost of the ~~project~~ project.

This would be foolish to spend taxpayers dollars and saddle our children with this long term debt. We are lucky to have cheap hydro in our province but I believe we will be personally paying for this project for a lifetime and our kids lifetime. In summary, do not let this project to go ahead as planned. If it needs to be built, build it the shortest and cheapest way. Do not go in the most productive farm land areas. Do not saddle us and our kids with future debt that is unnecessary if there is a cheaper route. If the commission's job is not to suggest an alternative route help you reject Manitoba Hydro's current proposal.

~~We should not agree~~ Thank You

Carl Mour
