RE: keepers Hydro Project

I am Vince Gill Scott, currently going to school at Otter Nelson River School in grade 10, 15 years old. This is what I think about the dam. I think that they shouldn't build another dam, one is good enough. Dams have done enough to our community so I say they shouldn't build another dam.

I say they shouldn't build another dam because one dam did enough damage to our community. Another dam will probably destroy our lands even more. The dam will make the animals habitats change. Make them migrate, leave to another location. Making trapping, fishing, hunting even more harder then it already is. The flooding will probably come even more higher, probably water will be cover the roads,

Another dam would probably make the animals population go down, downer until there are no more animals. They destroy plants the food that animals eat if there are no food for the animals forcing them to move down south away from us or even worse they could die! Enough said
(hope you understand!)
