

Delfina umpherville October 9,13

Grade12

I think that the hydro dam is a bad idea for the environment for the community. The community needs to have a healthy life style. However, it affects many people in our community such as the roads how the water floods and the lands where many people go hunting not just the roads or land there are activity what elders enjoy the most is netting fishes in the lake for pedicel reason how the water level could be its sometime hard to find the spot to fish. There a lot environment that could affect the animals because the animals here suffer there are in danger and they could or die. That's why we need the lakes to be clean so it won't harm them also for the people around us.
