Hello,

I am writing to express my opposition to this project.

In our climate changed world, we will be facing unique and extreme weather challenges in the upcoming years, let alone the next 4 or 24, with further threats to freshwater and drinking water. With this said, we need to do everything we can to protect clean drinking water as it will become more valuable than gold... or silica in this case.

Anything that threatens the state of water and more especially drinking water, should not even be considered as a viable project.

I again emphasize, if there is even a small threat of degradation, destruction and/or contamination to clean drinking water, the project should not and never be considered as this effect is irreparable. We must be looking toward the long run - as clean water will become invaluable.

Thank you for your time,

Tamara Roshka
