Good morning I am writing this letter in opposition to the Sio sands application for a license to drill in the municipality of Springfield Mb. The environment is not something that should be taken lightly, in the last ten years there has been significant changes experienced around the world. If we allow this project to go ahead there is no repairing the damage that this project would inflict on our most precious resource our water. This non tested way of extraction has no data that can be referred to by your committee. We have lived in Springfield for over 30 years and depend on our drinking water which is very clean and tasty, my concern is we have no opportunity to be connected to a water system that would ensure us the same safe and clean water. So what if this project is approved and my safe and clean water is contaminated who is going to be responsible. The Sio sands company not a chance they would probably close their business, our municipality cost is more than they could handle, the government they would hold it up for years in the courts so where does that leave me. It means as a pensioner I would have to incur all costs to ensure that I could have safe and clean water again. The answer is simple deny the applications the environment will be much better and I will have my safe and clean water without any further expenses. You are the keepers of our climate and our environment and my husband and I strongly encourage you to stop this project. The earth needs you to protect it.

Thank you
Marilyn and Alan
Macdonald
