One quarter of the population of earth right now have no access to unpolluted clean drinking water.this is the most precious resource on the planet today. It is inconceivable that we would jeopardize the largest most pristine Aquifer in manitoba, for a few jobs and profit motivated corporation.this is 0 thinking ahead for the future of our children grandchildren and sustainable future of all in this largest municipality. Water like air is the giver of life,do not take any risks with this resource. It took millions of years to create this Aquifer and we stand to possibly destroy it in a few decades.
