It seems apparent that, multiple times over, Sio Silica has misrepresented the negative environmental impacts of their proposed project at Vivian Mb. In fact, they have become so cavalier with their underestimations impact, the students of Seven Oaks Met School were able to discover Sio's misrepresentations! Hats off to those students!

Given Sio's clear and unabashed obfuscations of facts, combined with their noncommittal towards the adoption of the Mining Association of Canada's climate change protocols ; approval for the Sio Silica project in Vivian (or elsewhere in Manitoba) should be firmly denied.

Clearly the negative environmental impacts as well as the possible risks to our aquifer supersede any monetary gain or supposed benefit towards the manufacture of solar panels.

Thank you for your work in this process.

Regards

Wendy McGraw
