I am sending my strong objection to having Silica Sand be operational in my R.M.

I have attended some information sessions to hear both sides (pro and cons)

After looking at all the data, our water is the most precious commodity. I do not want our water supply contaminated. Even though jobs may be created in our area, this does NOT come close to being a valid reason for allowing this operation to exist here.

Currently I live on an acreage. I drink water from my well. Apparently this aquifer has great water. I do not want this to change. I don't want to have water haled to my property in the future

This operation can not absolutely guarantee that our water will not be contaminated.

I don't want our area to be a "test" pilot project. Once a company has moved in, it is hard to cease operations.

Please don't let them start a business here. Our community and R.M have potential for other businesses that pose no threat to our environment and water supply.

Other areas have turned down Silica Sand.

And for a good reason.

Enter my name as OPPOSED

Linda Jackson
