Subject: Health Care and Hog Barns !

April 16,2007

Open Letter

To whom it may concern

Recently reading in the Winnipeg Free Press, Mr. Craig Sangster wrote of poor air quality reports in St. Boniface and Transcona. Mr. Karl Kynock boasts and gives specific statistics about population growth in areas where millions of pigs are raised. Yet shows no concerns about the stench in the air, that young children and grownups are exposed to and continuously breathing.

He expects that the CEC interim report will be really positive for the hog industry ! How can he expect the CEC do so, considering that under oath I gave this statement, to the CEC Hog Review Panel at their Arborg meeting on March 8, 2007 " Risks of animal confinements are known (Des Moines Register) 12-7-06 " " Asthma rates in children " " But, we seem to live in a state where even though we know it is immoral to poison our children, it is not illegal. " Along with a written copy that went into more details that was posted on the internet. For those of you who care to know more you can click on this site <http://www.oneota.net/~watsoncampaign/agriculture.htm> . I'm am not going to ask the

Manitoba Pork Council for it's opinion, rather I will be sending this letter to our provincial Health Minister, Ms. Theresa Oswald and others who may care too know. So Ms. Oswald where does the Hog Industry in Manitoba relate to when it comes to the Medical Clinic ? Are all workers in contact with this environment regularly tested by Manitoba Health and Safety ? Ms. Oswald can you produce any scientific studies that disputes any negative Health claims ? Have any negative health studies ever been done in Manitoba that concern the Corporate Hog Barn Industry, that encompasses this sensitive topic of Psychological, Social and Public Health. ? In the long run what could it be costing taxpayers ? Here are some statistics that were included and given to the CEC Hog Review Committee, ***"Proximity of children to confinements" studies done since 2004 show even more alarming results. Iowa's overall rate of asthma is about 6.7%. To generalize, it has been found that if a rural school has a confinement within 10 miles, 11.7% of the children have asthma - twice the state rate. If a confinement is ½ mile away from a school, 24.6% of children have asthma - four times the state rate. And if you are a kid unlucky enough to live on a farm with a confinement, there is a 55.8% chance you will have asthma - nine times the state rate."*** I'm positive that everyone will agree that Health clean Water and Air trumps all other statistics of any kind. All the time! Lets not forget why legal actions were launched against the Tobacco Industry and recently the possibility of some Pet Foods Manufactures could end up with class action lawsuit as well, all because Health was put at risk.

Respectfully
