EXHIBIT NUMBER: WSUB-042
File Name: Hog Review
Date: May 2, 2007
Received by: [Signature]
(Commission Secretary)

To: **Manitoba Clean Environment Commission**
Fax: (204) 945-0090
Attn : Cathy Johnson

- The hog industry is only responsible for about 1 to 1.5 % of phosphorus and they are trying hard to reduce it.
- The industry pause or moratorium may hurt my family and may impact my future employment. The whole economy is also being hurt, not only hog farmers but suppliers, construction, restaurants, car dealerships, gas stations, grocery stores, and so on!
- Manitoba needs all the industry and employment generating business possible. Don't hinder that by hauling the hog industry.
- Stopping the hog industry in Manitoba will only drive the industry to Saskatchewan and states south of Manitoba. The result of that will be lost investment, jobs, hurt our economy and Lake Winnipeg is still down river from all those places, so actually could hurt the lake more, because we will not be able to control what the neighbours do with their manure! Manitoba loses on both sides! Makes no sense!
- People need food, pork is food, unless the world goes vegetarian, pork will continue to be produced somewhere. Stopping it here only shifts it to the neighbours. Neighbours will benefit from the economics, jobs, investments, and we will continue to be a have-not Province.

Stop hurting the economy and let the hog industry resume in Manitoba immediately before everyone moves to the next Province or State and does more damage to our lake!
