Comment : Hog Production Industry Review Hog production in Manitoba is out of control, and it has been that way for many years. This is an industry that is environmentally destructive by definition:
- It consumes massive quantities of water and other resources, both at the hog barn and at the slaughterhouse. - I consumes massive amounts of energy, both at the hog barn and at the slaughterhouse, and also in transportation. - It produces massive amounts of waste, both at the hog barn and at the slaughterhouse. - It produces massive amounts of odor, both at the hog barn and at the slaughterhouse. - It produces massive amounts of pollution, both at the hog barn and at the slaughterhouse. Eat local. Eat organic. Eat low on the food chain. Be part of the solution, not part of the problem.
