Subject: FW: [Factory Farms]

Hello, to all it may concern,

I am strongly against the idea of new factory farms, it takes the meaning out of the word farming; its not living off the land, its taking from the land. Personnally I don't eat any meat unless its from an individually operated farm, and I know what the animals are fed and how they are cared for. This is because of the fact that the animals are treated unfairly, and they are kepted in close confinement, and have parts of thier bodies(depending on the animal which part) removed, and they are fed unmentinables. To think that the wasts from these unnatural animals is going into our lakes and rivers, is rediculous! If its this bad now, and not on the road to recovery... just imagine how the environment will be for our childerens' childeren. We pride in our lakes and rivers here in Manitoba and if we imagine what it would be like not to expirence jumping in a cool lake in the summer, niether will any tourists and cabin goers. That will hurt our economy ten times worse then not having extra factory farms in our beautifull province, that we do not need. If that hard earned money goes anywhere, it should be to the real farmers doing it the proper way, if man kind has lasted that long on simple farming we can last well into the future with it too.

sincerly

Kaela Kowalke
